

Postdoctoral fellow

A postdoctoral position is available in Karel Riha's group at the Gregor Mendel Institute of Molecular Plant Biology in Vienna, Austria (<http://www.gmi.oeaw.ac.at>). The Gregor Mendel Institute is a newly founded research facility of the Austrian Academy of Sciences that is integrated in the international and highly prolific scientific environment of the Vienna Biocenter.

The lab is primary interested in understanding the structure, function and replication of telomeres. We are looking for a highly motivated scientist, preferably with a background in biochemistry or chromatin analysis, to undertake a project focused on functional analysis of telomeric chromatin.

Interested candidates should sent their application including a cover letter, CV and contact information for at least two referees to Dr. Karel Riha: karel.riha@gmi.oeaw.ac.at
